### :60 “Ebola: know the facts”

There is a confirmed case of Ebola in Kentucky. The Kentucky Department for Public Health is taking measures to control and prevent the spread of Ebola.

Symptoms of Ebola appear 2 to 21 days after exposure. Most common symptoms include:

Fever, Severe Headache, Abdominal Pain, Diarrhea, or Vomiting.

Ways to treat Ebola symptoms include:

- Provide intravenous fluids and balance electrolytes
- Maintain oxygen status and blood pressure and
- Treat other infections as they occur.

There is currently no FDA-approved Ebola vaccine.

To prevent Ebola's spread:

Avoid contact with the bodily fluids of a person infected with Ebola or who has died from Ebola. These fluids may include blood or urine from an infected person or semen from a person who has recovered from Ebola.

Avoid objects contaminated by the virus including needles and clothes.

To prevent spreading Ebola, wash your hands frequently using soap and water, or an alcohol-based hand sanitizer.

The Kentucky Department for Public Health will provide regular updates on this outbreak. For more information go to [www.healthalerts.ky.gov](http://www.healthalerts.ky.gov) or call (XXX) XXX-XXXX.
